PROFESSIONAL SUMMARY

DevOps Engineer with 5+ years of IT experience specializing in Cloud Infrastructure, CI/CD Automation, DevOps Engineering, Application Support, and Software Quality Assurance across Banking, Financial Services, and Insurance domains.

Hands-on experience designing, implementing, and managing cloud solutions on Microsoft Azure and Amazon Web Services (AWS), including Azure Virtual Machines, AKS, Azure Storage, Azure Key Vault, AWS EC2, S3, RDS, ECS, EKS, IAM, and VPC services.

Strong expertise in building and maintaining enterprise-grade CI/CD pipelines using Azure DevOps, Jenkins, GitHub Actions, and GitLab CI/CD to automate application delivery, release management, and deployment processes.

Proficient in Infrastructure as Code (IaC) using Terraform, AWS CloudFormation, and ARM Templates for automated infrastructure provisioning, configuration management, environment standardization, and cloud resource optimization.

Extensive experience with Version Control Systems including Git, GitHub, Azure Repos, and Bitbucket, implementing branching strategies, pull request workflows, code reviews, and release governance practices.

Skilled in Containerization and Orchestration technologies including Docker, Kubernetes (AKS/EKS), Helm, and Container Registries for deploying, scaling, and managing cloud-native microservices applications.

Experienced in Scripting and Automation using Python, PowerShell, Bash, Shell Scripting, and YAML to streamline infrastructure provisioning, deployment automation, operational workflows, and system administration tasks.

Strong background in Observability, Monitoring, and AIOps utilizing Azure Monitor, Application Insights, AWS CloudWatch, Prometheus, Grafana, ELK Stack, Splunk, and BMC TrueSight to improve system reliability, performance monitoring, incident management, and predictive analytics.

Expertise in implementing DevSecOps practices including vulnerability assessments, security scanning, secrets management, compliance validation, container security, policy enforcement, and secure software delivery aligned with regulatory and governance standards.

Proven experience supporting Agile SDLC environments with expertise in REST API integrations, Postman, SQL Server, Azure SQL Database, PostgreSQL, AWS RDS, AI/ML-powered operational analytics, production support, release management, root cause analysis, and cross-functional collaboration to deliver scalable, secure, and high-performing enterprise solutions.

TECHNICAL SKILLS

WORK EXPERIENCE

ServisFirst Bank – Birmingham | DevOps/Cloud Engineer Jan 2026 - Current

Collaborate with business stakeholders, solution architects, application development teams, and security teams to gather requirements and design secure, scalable, and compliant cloud solutions supporting core banking, commercial lending, treasury management, online banking, and payment processing applications throughout the SDLC.

Design, develop, and maintain enterprise CI/CD pipelines using Azure DevOps, Jenkins, GitHub Actions, and GitLab CI/CD to automate build, testing, deployment, and release processes for banking applications while ensuring regulatory compliance and audit readiness.

Manage Version Control Systems (Git, GitHub, Azure Repos, Bitbucket) by implementing branching strategies, code reviews, pull request workflows, and release governance standards to support multiple banking product teams.

Develop automation solutions using Python, PowerShell, Bash, and YAML scripting to streamline infrastructure provisioning, deployment automation, configuration management, environment setup, and operational support for banking platforms.

Provision and manage cloud infrastructure using Terraform, AWS CloudFormation, and ARM Templates, implementing Infrastructure as Code (IaC) practices to support highly available and secure banking environments across Azure and AWS.

Deploy, configure, and administer cloud services on Microsoft Azure and AWS, including Azure Virtual Machines, AKS, Azure Storage, Azure Key Vault, AWS EC2, S3, RDS, EKS, ECS, IAM, and VPC services supporting customer-facing and back-office banking applications.

Build and manage containerized microservices architectures using Docker, Kubernetes (AKS/EKS), Helm, and container registries to support digital banking, loan origination, account management, and payment processing systems.

Implement enterprise Observability and Monitoring solutions using Azure Monitor, Application Insights, AWS CloudWatch, Prometheus, Grafana, ELK Stack, and Splunk to proactively monitor transaction processing, application performance, and infrastructure health.

Integrate DevSecOps practices into software delivery pipelines by implementing automated security scanning, vulnerability management, secrets management, policy enforcement, compliance validation, and container security controls to meet banking regulatory requirements.

Support secure integration of banking applications by validating REST APIs, authentication protocols, data encryption mechanisms, and service communications between core banking platforms, payment gateways, credit bureaus, and third-party financial systems.

Collaborate with database teams to automate deployments, optimize release processes, and support SQL Server, Azure SQL Database, PostgreSQL, and AWS RDS environments while ensuring data integrity, backup, recovery, and regulatory compliance.

Utilize AI/ML-powered AIOps and predictive analytics solutions to identify transaction anomalies, predict infrastructure failures, enhance capacity planning, and improve operational intelligence across banking platforms.

Implement intelligent monitoring and automated remediation workflows using AI-driven insights to reduce incident response times, improve system availability, and enhance customer experience for digital banking services.

Lead production deployment activities, release validations, smoke testing, disaster recovery exercises, rollback planning, and post-deployment verification for mission-critical banking

applications while minimizing operational risk.

Participate in Agile SDLC activities including sprint planning, backlog refinement, architecture reviews, production support, root cause analysis, and continuous improvement initiatives to enhance software delivery, operational resilience, and digital transformation across the banking ecosystem.

Capgemini India Pvt Ltd – Hyderabad | Associate Consultant (DevOps Engineer) Feb 2022 – May 2023

Client: MetLife, Capgemini

Collaborated with business stakeholders, solution architects, developers, and operations teams to gather requirements, design integration solutions, and support enterprise applications throughout the Software Development Life Cycle (SDLC).

Designed, implemented, and maintained cloud infrastructure using Azure DevOps, Terraform, and Infrastructure as Code (IaC) practices, enabling automated provisioning, environment consistency, and scalable deployments.

Developed and managed CI/CD pipelines in Azure DevOps for application and database deployments, reducing manual intervention, improving release quality, and accelerating delivery cycles.

Performed SQL development, query optimization, indexing, stored procedure tuning, and execution plan analysis to improve database performance and support high-volume business transactions.

Supported enterprise integration solutions by validating REST APIs, SFTP-based file transfers, XML/CSV data exchanges, and middleware workflows, ensuring seamless communication across ERP, reporting, and downstream systems.

Utilized Postman, Azure DevOps, and Git version control to validate APIs, manage code deployments, track releases, and support automated build and deployment processes.

Implemented application and infrastructure monitoring using BMC TrueSight, proactive alerting, log analysis, and incident management practices to improve system reliability and operational efficiency.

Executed functional, integration, regression, and data validation testing for enterprise applications, ensuring data accuracy, business rule compliance, and successful end-to-end processing across integrated platforms.

Performed data reconciliation, root cause analysis, defect management, and production support activities while collaborating with development, QA, infrastructure, and business teams to resolve critical issues.

Participated in Agile and DevOps practices including sprint planning, release management, deployment validation, environment management, production support, continuous monitoring, documentation, and process improvement initiatives to enhance software delivery and operational excellence.

Canara HSBC OBC – Hyderabad | Software Developer/QA Analyst June 2019 – Feb 2022

Collaborated with Business Analysts and stakeholders to analyze business requirements, functional specifications, and insurance product workflows for Health, Life, Savings, and Income Insurance applications during the requirements phase of the SDLC.

Designed and executed comprehensive test plans, test scenarios, and test cases to validate insurance policy issuance, customer onboarding, quotation generation, underwriting, and policy servicing processes.

Performed Functional, System, Integration, Regression, Smoke, and User Acceptance Testing (UAT) across multiple insurance platforms including Group Asia, INEGIUM, Workflow, TABLET, COGNOS, Online, and ODES.

Validated insurance business rules, premium calculations, maturity benefits, policy term calculations, rider selections, income payout schedules, and regulatory compliance requirements.

Conducted end-to-end testing of insurance quote comparison, benefit illustration generation, policy application, and policy issuance workflows to ensure accurate business processing.

Executed cross-platform testing for web and tablet applications, validating UI/UX functionality, responsiveness, navigation, and compatibility across various devices and operating environments.

Tested offline and online synchronization features of tablet-based insurance applications used by field agents, ensuring secure and accurate data transmission between front-end and backend systems.

Performed API testing using Postman to validate RESTful services related to premium calculations, customer data management, quotation processing, policy issuance, and backend integrations.

Managed defect lifecycle activities using JIRA, including defect identification, logging, tracking, retesting, root cause analysis, and collaboration with development teams for timely resolution.

Participated throughout the Agile SDLC by contributing to sprint planning, backlog refinement, daily stand-ups, sprint reviews, release validation, production smoke testing, and continuous quality improvement initiatives.

EDUCATION:

Master of Science in Management Information Systems

Auburn University at Montgomery (AUM) – Montgomery, AL -2025

Bachelor of Technology in Electronics and Communication Engineering

Jawaharlal Nehru Technological University Hyderabad, India – 2019
